Computable Publishing®: EvidenceVariable Viewer

Computable Publishing®: EvidenceVariable Viewer displays an EvidenceVariable Resource in human-readable form.

The online tool is available on the FEvIR Platform (example viewable at https://fevir.net/resources/EvidenceVariable/32140) - and is one of several Builder Tools and Viewer Tools. The FEvIR Platform provides access to an array of tools which enable creating and viewing scientific knowledge in standard-based, machine-interpretable units called Resources. Most Resources use the HL7® FHIR® standard specification. Builder Tools enable creation of a FHIR® Resource without any working knowledge of FHIR® or JSON. Viewer Tools enable human-friendly viewing of a FHIR® Resource. Views may include outline representation of the JSON and/or specialized views based on the resource type.

Computable Publishing®: EvidenceVariable Viewer version 0.5.0 (April 22, 2022) features include:

View extensive structured data for Eligibility Criteria in easy-to-navigate form
- Each characteristic clearly separated as Inclusion or Exclusion criterion
- Each characteristic clearly defined, described, and any qualifiers displayed
- Combinations of characteristics (all of, any of, at least n, at most n, etc.) clearly shown in cascading structure

View statistical handling instructions
- Handling may be continuous, dichotomous, ordinal, or polychotomous
- Each category can be defined for categorical handling

This is an impressive Resource
- And that is no joke.

See Computable Publishing®: EvidenceVariable Viewer version 0.5.0 (April 22, 2022) for latest release notes.
