Computable Publishing®: MyBallot

Computable Publishing®: MyBallot will identify all Code Systems for which you are signed up for a voting group, identify all terms open for voting, present you all the concepts being voted upon, present all your current active votes, allow you to set or change your votes for all terms on one screen, then submit all desired votes at once.

The online tool is available at https://fevir.net/myballot on the FEvIR Platform - and is one of several available Specialized Tools. The FEvIR Platform provides access to an array of tools which enable creating and viewing scientific knowledge in standard-based, machine-interpretable units called Resources. Most Resources use the HL7® FHIR® standard specification.

Computable Publishing®: My Ballot version 0.4.1 (March 25, 2022) features include:

See all items open for voting in one view
- Set or change all your votes for all terms on one screen

Vote and add comments in one view
- Submit all your desired votes at once

Vote early and often
- While items are open for voting, users can change their vote at any time.

See Computable Publishing®: My Ballot version 0.4.1 (March 25, 2022) for latest release notes.
