

Computable Publishing®: Project Builder/Viewer

Computable Publishing®: Project Builder creates a “Project Resource”, without the need for the author to edit directly in JSON.

Computable Publishing®: Project Viewer displays a “Project Resource” in human-readable form.

The online tool is available at <https://fevir.net/createproject> on the FEVIR Platform (example viewable at <https://fevir.net/resources/Project/29272>) - and is one of several Builder Tools and Viewer Tools. The FEVIR Platform provides access to an array of tools which enable creating and viewing scientific knowledge in standard-based, machine-interpretable units called Resources. Most Resources use the HL7® FHIR® standard specification. Builder Tools enable creation of a FHIR® Resource without any working knowledge of FHIR® or JSON. Viewer Tools enable human-friendly viewing of a FHIR® Resource. Views may include outline representation of the JSON and/or specialized views based on the resource type.

The “Project Resource” is not a FHIR® Resource.

[Computable Publishing®: Project Builder/Viewer](#) version 0.14.0 (February 3, 2022) features include:

A space to define and share your project

- You can set up a page and unique identifier for any project.
- You can add a title, description, and any number of text-based Project Details.

Associate resources with your project

- You can associate any Resources on the FEVIR Platform with your project.
- Use your project page as way to make collections of Resources.

Incorporate Actions with your project

- Contact support@computablepublishing.com for development of Project Actions, for example
 - The [Scientific Evidence Code System \(SEVCO\) Project](#) has a **Join the Group** button.
 - The [Risk of Bias Assessment Tool \(RoBAT\) Usability Research \(RoBATUR\) Project](#) has many actions including **View Eligibility Criteria** and **Complete Intake Form** – there was an **Enroll** button when this research project was underway.

See [Computable Publishing®: Project Builder/Viewer](#) version 0.14.0 (February 3, 2022) for latest release notes.

The FEVIR Platform uses the HL7® FHIR® standard ([current build](#)). HL7®, and FHIR® are the registered trademarks of Health Level Seven International and their use of these trademarks does not constitute an endorsement by HL7.
