

Computable Publishing®: ValueSet Builder/Viewer

Computable Publishing®: ValueSet Builder creates a FHIR® ValueSet Resource, without the need for the author to edit directly in JSON.

Computable Publishing®: ValueSet Viewer displays a ValueSet Resource in human-readable form.

The online tool is available on the FEvIR Platform (example viewable at <https://fevir.net/resources/ValueSet/29244>) - and is one of several Builder Tools and Viewer Tools. The FEvIR Platform provides access to an array of tools which enable creating and viewing scientific knowledge in standard-based, machine-interpretable units called Resources. Most Resources use the HL7® FHIR® standard specification. Builder Tools enable creation of a FHIR® Resource without any working knowledge of FHIR® or JSON. Viewer Tools enable human-friendly viewing of a FHIR® Resource. Views may include outline representation of the JSON and/or specialized views based on the resource type.

[Computable Publishing®: ValueSet Builder/Viewer](#) version 0.5.0 (December 23, 2021) features include:

Create a FHIR ValueSet Resource with no technical expertise

- Enter data in easy-to-use data entry fields.
- Create any number of terms in any number of code system sets.
- Create JSON without direct editing of the JSON.

Import terms from a CodeSystem Resource

- Enter a system URL to a CodeSystem on the FEvIR Platform.
- Optionally select a term within the CodeSystem, and optionally select whether to include all child terms or first-order child terms only.
- Automatically create a value set.

42

- What was the question?

See [Computable Publishing®: ValueSet Builder/Viewer](#) version 0.5.0 (December 23, 2021) for latest release notes.

The FEvIR Platform uses the HL7® FHIR® standard ([current build](#)). HL7®, and FHIR® are the registered trademarks of Health Level Seven International and their use of these trademarks does not constitute an endorsement by HL7.
